INTERESTS

- 3D modeling and printing
- Prototyping (ESP32 MacroKeyboard, custom toolhead)
- Music: Percussion (12 years)
- Sports: Tennis, Basketball, Freediving, Sailing: Optimist, Catamaran

SKILLS

CAD: Solidworks, Fusion360

CFD: Fluent

Programming: Python, Fortran, C++, HTML, CSS, JavaScript

Communication: LaTeX, Office Suite

Personal skills: Self-driven, Rigorous, Tenacious

LANGUAGES

French

Native (C2)

English

Proficient (C1)

Spanish

Intermediate (B1)

Chinese

Beginner (A2)

YVAN JACOB

Engineering Student – ENSEEIHT MF2E

An overview of my education, projects, experience, and personal interests.

PROFILE

First-year engineering student at ENSEEIHT specializing in fluid mechanics, I am interested in challenges related to energy, the environment, and complex systems. Through my projects, I have developed skills in modeling, programming, and the design of experimental systems. I am a curious person who is not afraid to move between technical work and human relations.

EDUCATION

Engineering Degree: Fluid Mechanics, 2025 – 2028
ENSEEIHT – Toulouse

Fluid Mechanics Department – Energy & Environment

Preparatory Programme for Engineering Schools (Classe Préparatoire), 2022 – 2025
Lycée Kléber – Strasbourg

Track: PCSI – PSI

EXPERIENCE

Board Member of a Junior Enterprise, 2026 – 2027
N7Consulting – Term 49

- Responsible for cohesion between board members, partners and alumni
- Organization of internal and external events
- Development of a management tool for partners
- In charge of business affairs and commercial development for the organization

Research Work – Laboratory, Summer 2026
Toulouse Fluid Mechanics Institute – First-year internship

- Study on head losses caused by macrophytes accumulated on grids
- Set-up of the experiment, pressure readings
- Understanding of industrial challenges, in particular through the set-up of a tomograph

Production Line Operator (3x8 shifts), Summer 2024
La Fournière Dorée – First experience in a company

- First-hand discovery of life in an industrial company
- Teamwork on rotating shifts (3x8)
- Adaptation to an industrial production environment
- Understanding of quality and pace requirements

Youth Group Leader – Sports Association, 2017 – 2020
Jura Dolois Basket – Holiday camps

- Supervision and activities for groups of children during holiday camps
- Development of teaching and communication skills
- Management of children's safety and well-being

PROJECTS

Pollutant propagation in a watercourse (Fortran90)

Numerical modeling and simulation of pollutant propagation in a watercourse.

Solving the advection-diffusion equation (Fortran90)

Numerical and physical modeling and analysis of results: mesh convergence, influence of the Péclet number, prediction of the steady-state regime, etc.

Numerical simulation / CFD (Ansys Fluent)

Study of several physical phenomena through simulation, including flow in a pipe, over a flat plate, and around an aircraft wing.

TIPE: Automated airsoft target (Python and C++)

Design and programming of an interactive target on Arduino: hit detection via ultrasonic sensors, score system management, and visual feedback via RGB LEDs. Looping game algorithm with random selection among active targets.

TIPE: Adiabatic air conditioning (Two-phase thermodynamics, Python and C++)

Construction of a direct adiabatic air-conditioning prototype: modeling in SolidWorks, instrumentation (DS18B20 and AHT10 sensors), automatic data acquisition via Arduino, and automatic control of pumps/fans in Python based on outlet temperature.

Association website – Odysée Nordique (HTML, CSS, JavaScript)

Full design and development of the Odysée Nordique association's website: graphic design, front-end integration (HTML/CSS/JS), search engine optimization (SEO), and production deployment.
